

BERG Purpose-Built Shelter Systems Decrease Spend and Increase Mission Readiness

ARE HEALTH AND READINESS ASSESSMENTS DISRUPTING YOUR UNIT'S TRAINING AND OPERATIONS?

BERG's purpose-built shelter systems offer a unique blend of mobility and capability at a reduced cost.

BERG shelter systems offer customers the perfect blend of flexibility and capability as a mobile, towable and transportable self-sustaining operational space. Their basic non-expandable, Conex-based shelter systems are available in a variety of sizes. For those looking for a more dynamic solution, BERG also offers their E2S2 line of expandable shelter systems. Both shelter systems are highly portable, can be loaded and offloaded by forklift or crane, and can be transported by flatbed or Palletized Load System (PLS).

Ideal for any customer mission that requires a rapidly deployable facility, the BERG purpose-built shelter systems increase soldier readiness and mobility while minimizing long-term costs associated with conducting training, health and readiness assessments.

Are You Prepared?
